

Can I Eat That?

A PROJECT FROM:

EMMA LYSYK, DYLAN KORTE, + MARK REIFKE

ELEVATOR PITCH

CONCEPT

- ***CAN I EAT THAT?*** is a PWA designed for those who struggle to find recipes that they can make while living with food allergies and/or specialty diets.
- Everyone needs food. Food is a common language of love. We all know someone with food restrictions. What you may not know is how excluded they may feel if there isn't a food available for them in a social setting. Now you can easily find options to include your loved ones back into your next potluck or gathering, making them feel loved and wanted.
- As a user, ***CAN I EAT THAT?*** allows me to easily filter through a recipe database based on my allergies *and* restrictions. There are options for me to select recipes that go with all types of diets and healthy eating.

PROCESS

- Technologies used:
 - **FERN** (Firebase User Auth, Express.js, React.js, Node.js), dotenv, Bootstrap, Heroku
- Breakdown of tasks and roles:
 - Back End - Dylan 🍊 Middleware - Emma 🍊 Front End - Mark
- Challenges:
 - Heroku...
 - Making all the pieces talk to each other
 - GitHub complexities and version overwrites
- Successes:
 - Firebase is awesome - new technology to use!
 - The jubilation of making it work, communicate, and look good while doing it

DEMO

DIRECTIONS FOR FUTURE DEVELOPMENT

- Phase 1.5 - Add saving of recipes functionality
- Phase 2 - Either replace or expand the API call list to pull more data to search through
- Phase 3 - Generate a shopping list for a selection of favourite recipes
- Phase 4 - Bilingual using the Spanish API
- Phase 5 - Add a restaurant API for a Restaurant Roulette that also looks for allergy and specialty diet safe options nearby.
